Muted Tones, Timeless Grace

ELEGANCE CRAFTED FROM THE ORGANIC CANVAS

When nature adorns its rawness, aesthetics emerge abundantly. The earth, with its soil, sand, and turf, creates a tapestry of muted, mellow tones. Even rivers, mountains and the skies sing a subtle, harmonious symphony.

Inspired by nature, ALUCOBOND® organics elegance is a curated spectrum of sophisticated shades. Much like warm hues of raw honey or hidden pearls in an oyster’s grasp, this collection celebrates the beauty that emerges from the unadulterated and unaltered. As the mist gently shrouds the earth before yielding to the nurturing rain, these seemingly unassuming muted colours unveil their true elegance.

ALUCOBOND® organics elegance showcases the very essence of nature's artistry. It is a tribute to the subtlety of organic beauty, where even the most unassuming shades unveil a world of grace and elegance.

ALUCOBOND® organics elegance is ideal for numerous applications such as façade cladding, interiors, balconies, ceilings, and column cladding.

ALUCOBOND® organics elegance, as an aluminum composite material, presents a fusion of qualities that set it apart. Its slender profile, light weight and rigidity are complemented by its exceptional formability. Through its ease of fabrication these panels can effortlessly evolve into intricate, multidimensional shapes with a sharp, impeccable geometry.

ALUCOBOND® organics elegance is sustainable and fully recyclable, underscoring its eco-conscious commitment. These characteristics position ALUCOBOND® organics elegance as the quintessential choice for cladding, where form and function harmonize to perfection.

Discover a rich palette of shades with ALUCOBOND® organics elegance. From warm, earthy tones to cool, contemporary hues, our collection offers a spectrum of colors to breathe life into your architectural vision.

GENERAL INFORMATION

The fluorocarbon (FEVE) coating is applied to the aluminium coil prior to lamination onto ALUCOBOND®, using a continuous coil coating process. The multiple layers are individually cured at temperatures between 200 - 260°C. The quality of the coating is tested according to standards established by E.C.C.A. (European Coil Coating Association) of which 3A Composites is a member. Fluorocarbon (FEVE) coating systems combine

good formability and excellent surface durability. They are extremely resistant against weathering, strong solar radiation and pollution.

Minimum order quantities apply. For more information and product specification please refer to your nearest ALUCOBOND® representative.
