ALUCOLUX[®]

SPECTRA

Enchanting surfaces for eye-catching impressions

FASCINATING COLOURS

Throughout history, people have always loved colours. From discovering purple dyes over 3,000 years ago to the invention of colour TV and movies in the 20th century, our world is full of colours. Colours can inspire and motivate us. And now, colours have evolved into manifestation of architectural art.

ALUCOLUX[®] spectra celebrate the natural colour shifts that occur in materials that affect everyday life: the subtle nuances and colour contrasts found readily in nature, the glowing luster and sheen in modern metals and the colour shifts found in today's luxury goods. Colour adds fascination to the world, ALUCOLUX[®] spectra adds fascination to architectural design.

GENERAL INFORMATION

ALUCOLUX[®] is a solid aluminium sheet that features multi-coat, multi-bake process on a continuous coil coating line using the highest grade of PVDF/FEVE paint system. The multiple layers are individually cured at temperatures of between 200-260°C. The quality of the coating is tested according to standards established by E.C.C.A. (European Coil Coating Association) of which 3A Composites is a member. Fluorocarbon (PVDF) coating systems combine good formability and excellent surface durability. They are extremely resistant to weathering, strong solar radiation and pollution.

ALUCOLUX[®] spectra operates on the same principles as natural colour shifting surfaces. Depending upon the pigment type and viewing angle, different wave lengths of light are reflected back to the audience resulting in an ever-changing colour gradient with iridescent highlights. The use of high-quality fluorocarbon paint systems applied in continuous coil-coating process ensures that the original design isn't compromised.

The colour reproduction in this chart is subject to printing limitations. For exact colour matching, request actual colour samples.

To avoid possible reflection variations, it is recommended to install the panels in the same direction as marked on the protective peel-off-foil. Colour variations may occur between panels originating from different production batches. To ensure colour consistency, the total requirement for a project must be placed in one order.

For more information please refer to your nearest ALUCOLUX[®] representative or visit www.alucolux.com

This fascinating array of colours and luster will outshine the skyline.
